

AMENDMENTS TO THE SPECIFICATION

Please replace paragraph [0039] with the following replacement paragraph:

[0039] The cover **24** is movable to a third position when released, which position exposes the ends of the flanges **47** and the end of the cavity **46** so that objects may be mounted on the bar by having portions thereof moved along the cavity **46** and engage the flanges **47**. This is accomplished via removal of all or part of the resilient strip **14** and replacement of at least a portion thereof when the article is secured to the bar **11**. The cover **24** remains captively attached to the base **12**.
